

Attaching Presses

Manual attaching presses are used when fasteners or clips are required to be assembled in low to medium volumes. Strength and reliability of fasteners can be assured if attached with these presses. Refer to other pamphlets for chuck and die requirements.

H50-H68 Heavy Duty Foot Press

Depth of throat 115mm (4.5")
Height of mounting 865mm (34")

Takes all size eyelets and washers by changing chuck and die.

Heavy duty presses can be used for all sizes of eyelets (except SP00), rope end / splice clips and durables supplied with threaded plunger to suit eyelets and plain plunger to suit fasteners.

HP100 Hand Press

The hand press is used for all sizes of brass eyelets, up to SP7's in stainless steel, durable fasteners, and rope clips up to and including 8mm
